PROFESSIONAL SUMMARY

Software Developer with 4+ years of experience building Android applications and backend services for retail and enterprise software companies in Italy. Sole developer on a production Android retail application, which I migrated from Java to Kotlin and rebuilt in Jetpack Compose, while working daily on .NET (C#) microservices, SQL databases and RabbitMQ messaging. Earlier experience in Java backend development with Spring Boot, Hibernate, PostgreSQL and MySQL. Comfortable owning a feature end to end, from device integration through to the service behind it.

TECHNICAL SKILLS

Languages	Kotlin, Java, C# / .NET 8, SQL, JavaScript, HTML/CSS
Mobile	Android SDK, Jetpack Compose, MVVM, Room, GreenDAO, device & peripheral integration
Backend	REST APIs, microservices, Spring Boot, Hibernate, Entity Framework Core, Blazor, .NET Razor Pages, DevExpress
Data & messaging	SQLite, SQL Server, PostgreSQL, MySQL, EF Core, RabbitMQ (exchanges, queues, routing keys)
Practices & tools	Git, Azure DevOps & Azure Pipelines, Docker, Postman, Maven, unit and UI testing, code review, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Development Specialist · Retail software company — Padova, Italy — Jun 2024 – Present

- Sole developer on a production Android application for retail chains, working directly with the product manager and owning delivery end to end.
- Migrated the application from Java to Kotlin, rebuilding the entire screen layer in Jetpack Compose with an MVVM architecture.
- Planned and implemented the local database migration from GreenDAO to Room, including SQLite schema migrations on installed devices.
- Built and maintained .NET (C#) microservices and REST APIs supporting the handheld application and administrative tools.
- Integrated RabbitMQ messaging connecting handheld devices, in-store applications and back-office services.
- Integrated retail peripherals — barcode scanning and receipt printing — with industrial Android devices.
- Developed a Blazor and DevExpress web application, now in production, for multi-store performance analysis.
- Support the application in production: crash and ANR investigation, release work with Azure Pipelines and Docker.

Software Developer · E-invoicing software company — Padova, Italy Mar 2023 – Apr 2024

- Backend development on an electronic invoicing platform built as Java microservices with ERP integration, using Spring Boot, Hibernate, PostgreSQL and MySQL.
- Migrated the build system from Ant to Maven and upgraded the platform from Java 8 to Java 17.
- Implemented an integration with legal archiving software to support digital preservation compliance.
- Wrote unit and UI tests, resolved critical production bugs, improved the client onboarding workflow and contributed to code reviews, documentation and CI/CD pipelines in an Agile team.

Intern Developer · Banking software company — Milan, Italy Sep 2022 – Jan 2023

- Built a Spring Boot and Hibernate application for a banking system, including user data management, a credit limit calculator and the authentication and secure access configuration.

Intern · E-invoicing software company — Padova, Italy Feb 2022 – Jul 2022

- Improved test automation for electronic invoicing software as the subject of the MSc thesis project, migrating test execution from local to remote browsers and increasing testing efficiency by 25%. Contributed to documentation and cross-team QA activities.

EDUCATION

MSc in ICT for Internet and Multimedia · University of Padova — Padova, Italy Aug 2020 – Dec 2022

BSc in Electrical & Electronics Engineering · University of Turkish Aeronautical Association — Ankara, Turkey Aug 2014 – Jun 2018

LANGUAGES

Turkish: native · English: professional working proficiency · Italian: B1–B2, used daily at work.
